

## VLM60/40 Series

**VLM60** 60 W  
**VLM40** 40 W

### 60 & 40 W, Efficient, Compact Constant Voltage Class 2 LED Drivers

Nominal Input Voltage	Max. Output Power	Nominal Output Voltage	Max. Output Current	Efficiency	Max. Case Temperature	THD	Power Factor
120/277 Vac, 220 to 240 Vac	60 W	12, 24, 48 Vdc	5, 2.5, 1.25 A	up to 90% typical	90°C (measured at the hot spot)	< 20%	> 0.9

#### FEATURES

- Very high power density of 20 W/in<sup>3</sup>
- Class 2 power supply
- IP20-rated case with silicone-based potting
- 90°C maximum case hot spot temperature
- Complies with ENERGY STAR®, DLC (DesignLight Consortium®) CA Title 24 and CA Title 24 technical requirements
- Lifetime: 50,000 hours min at 70°C case temperature
- UL Class P
- Worldwide safety approvals

#### TYPICAL APPLICATIONS

- Strip lights
- Pendants
- Linears
- Cove Lights

### 2 - INPUT SPECIFICATION (@25°C ambient temperature)

	Units	Minimum	Typical	Maximum	Notes
<b>Input Voltage Range (Vin)</b> - Models with flying leads - Models with "-T" suffix	Vac	90 198	120, 277 230	305 264	•The rated output voltage for each model is achieved at Vin≥105 Vac & at Vin≥198 Vac for models with flying leads, and at Vin≥209 Vac for models with "-T" suffix •At maximum load, as specified in section 1.
<b>Input Frequency Range</b> - Models with flying leads - Models with "-T" suffix	Hz	47 47	60 50	63 53	
<b>Input Current (Iin)</b>	A			0.7 A @ 120 Vac 0.4 A @ 230 vac 0.3 A @ 277 Vac	
<b>Power Factor (PF)</b>		0.9	> 0.9		•At nominal input voltage •From 100% to 60% of rated power
<b>Inrush Current</b>	A	Meets NEMA-410 requirements			•At any point on the sine wave and 25°C
<b>Leakage Current</b>	µA			400 µA @ 120 Vac 800 µA @ 230 Vac 920 µA @ 277 Vac	Measured per IEC60950-1
<b>Input Harmonics</b>	Complies with IEC61000-3-2 for Class C equipment				
<b>Total Harmonics Distortion (THD)</b>				20%	•At nominal input voltage •From 100% to 60% of rated power •Complies with DLC (Design Light Consortium) technical requirements
<b>Efficiency</b>	%	-	up to 90%	-	Measured with nominal input voltage
<b>Isolation</b>	The AC input to the main DC output is isolated and meets Class II reinforced/double insulation power supply 				

### 3 - MAIN OUTPUT SPECIFICATION (@25°C ambient temperature)

	Units	Minimum	Typical	Maximum	Notes
<b>Output Voltage (Vout)</b>	Vdc		12, 24, 48		See ordering information for details
<b>Output Current (Iout)</b>	A			12 Vdc: 5.0 A 24 Vdc: 2.5 A 48 Vdc: 1.25 A	The rated output voltage for each model is achieved at Vin≥105 Vac & at Vin≥198 Vac for models with flying leads, and at Vin≥209 Vac for models with "-T" suffix.
<b>Output Voltage Regulation</b>	%	-5		5	•At nominal AC line voltage •Includes load and current set point variations.
<b>Output Voltage Overshoot</b>	%	-	-	10	The driver does not operate outside of the regulation requirements for more than 500 ms during power on with maximum load.
<b>Ripple Voltage</b>	≤ 5% of rated output voltage for each model				•Measured at maximum load and nominal input voltage •Calculated in accordance with the IES Lighting Handbook, 9th edition
<b>Start-up Time</b>	ms			500	•Measured from application of AC line voltage to 100% light output •Complies with California Title 24 and ENERGY STAR® luminaire specification.

### 4 - ENVIRONMENTAL CONDITIONS

	Units	Minimum	Typical	Maximum	Notes
<b>Operating Ambient Temperature (Ta)</b>	°C	-20		50	50°C is the non-derated temperature (Refer to section 6 "Output power de-rating at higher temperatures".
<b>Maximum Case Temperature (Tc)</b>	°C			+90	Case temperature measured at the hot spot •tc (see label in page 10)
<b>Storage Temperature</b>	°C	-40		+85	
<b>Humidity</b>	%	5	-	95	Non-condensing
<b>Cooling</b>	Convection cooled				
<b>Acoustic Noise</b>	dBA			22	Measured at a distance of 1 foot (30 cm)
<b>Mechanical Shock Protection</b>	per EN60068-2-27				
<b>Vibration Protection</b>	per EN60068-2-6 & EN60068-2-64				
<b>MTBF</b>	> 200,000 hours when operated at nominal input and output conditions, and at Tc ≤ 70°C				
<b>Lifetime</b>	50,000 hours at Tc ≤ 70°C maximum case hot spot temperature (see hot spot •tc on label in page 10)				

### 5 - EMC COMPLIANCE AND SAFETY APPROVALS

EMC Compliance			
<b>Conducted and Radiated EMI</b>	<ul style="list-style-type: none"> <li>Models with flying leads: FCC CFR Title 47 Part 15 Class B at 120 Vac and Class A at 277 Vac</li> <li>Models with "-T" suffix: EN55015 (CISPR 15) compliant at 220, 230, and 240 Vac</li> </ul>		
<b>Harmonic Current Emissions</b>	IEC61000-3-2	For Class C equipment	
<b>Voltage Fluctuations &amp; Flicker</b>	IEC61000-3-3		
<b>Immunity Compliance</b>	<b>ESD (Electrostatic Discharge)</b>	IEC61000-4-2	6 kV contact discharge, 8 kV air discharge, level 3
	<b>RF Electromagnetic Field Susceptibility</b>	IEC61000-4-3	3 V/m, 80 - 1000 MHz, 80% modulated at a distance of 3 meters
	<b>Electrical Fast Transient</b>	IEC61000-4-4	± 2 kV on AC power port for 1 minute, ±1 kV on signal/control lines
	<b>Surge</b>	IEC61000-4-5	<ul style="list-style-type: none"> <li>± 2 kV line to line (differential mode) / ± 2 kV line to common mode ground (tested to secondary ground) on AC power port, ±0.5 kV for outdoor cables</li> <li>Higher surge is available. Please contact your ERP representative or send an email to SaveEnergy@erp-power.com.</li> </ul>
		ANSI/IEEE c62.41.1-2002 & c62.41.2-2002 category A, 2.5 kV ring wave	
	<b>Conducted RF Disturbances</b>	IEC61000-4-6	3V, 0.15-80 MHz, 80% modulated
	<b>Voltage Dips</b>	IEC61000-4-11	>95% dip, 0.5 period; 30% dip, 25 periods; 95% reduction, 250 periods

Safety Agency Approvals	
<b>UL</b>	Models with flying leads: UL8750 listed Class 2
<b>cUL</b>	Models with flying leads: CAN/CSA C22.2 No. 250.13-14 LED equipment for lighting applications
<b>CE</b>	Models with "-T" suffix: IEC61347-2-13 electronic control gear for LED Modules & EN55015 (EMC compliance)
<b>CB</b>	For models with "-T" suffix
<b>ENEC</b>	For models with "-T" suffix

Safety					Notes
	Units	Minimum	Typical	Maximum

# 60 & 40 W, Efficient, Compact Constant Voltage Class 2 LED Drivers

### 6 - PROTECTION FEATURES

#### Under-Voltage (Brownout)

The VLM60/40 series provides protection circuitry such that an application of an input voltage below the minimum stated in section 1 (Input Specification) shall not cause damage to the driver.

#### Short Circuit and Over Current Protection

The VLM60/40 series is protected against short-circuit such that a short from any output to return shall not result in a fire hazard or shock hazard. The driver shall hiccup as a result of a short circuit or over current fault. Removal of the fault will return the driver to within normal operation. The driver shall recover, with no damage, from a short across the output for an indefinite period of time.

#### Internal Over temperature Protection

The VLM60/40 is equipped with an internal temperature sensor on the primary power train. Failure to stay within the convection power rating will cause the driver to shut down. The main output current will be resumed when the temperature of the built-in temperature sensor cools adequately.

#### Output Open Load

A no load condition will not damage the VLM60/40 or cause a hazardous condition. The driver will remain stable and operate normally after application of a load. When the LED load is removed, the output voltage of the VLM60/40 series is limited to 7% about the output voltage of each model.

#### Over Power Protection

The VLM60/40 will shut down and auto recover when its input power exceeds approximately 110% of 96 W. This condition will cause no damage to the power supply.

#### Input Over Current Protection

The VLM60/40 series incorporates a primary AC line fuse for input over current protection.

### 7 - OUTPUT POWER DE-RATING AT ELEVATED TEMPERATURES

The VLM60/40 series can be operated with cooling air temperatures above 50°C by linearly de-rating the total maximum output power (or current) by 2.5%/°C from 50°C to 70°C (see figure 1).

Figure 1

# 60 & 40 W, Efficient, Compact Constant Voltage Class 2 LED Drivers

### 8 - PREDICTED LIFETIME VERSUS CASE AND AMBIENT TEMPERATURE

Lifetime is defined by the measurement of the temperatures of all the electrolytic capacitors whose failure would affect light output under the nominal LED load and worst case AC line voltage. The graphs in figure 1 are determined by the electrolytic capacitor with the shortest lifetime, among all electrolytic capacitors. It represents a worst case scenario in which the LED driver is powered 24 hours/day, 7 days/week. The lifetime of an electrolytic capacitor is measured when any of the following changes in performance are observed:

- 1) Capacitance changes more than 20% of initial value
- 2) Dissipation Factor ( $\tan \delta$ ): 150% or less of initial specified value
- 3) Equivalent Series Resistance (ESR): 150% or less of initial specified value
- 4) Leakage current: less of initial specified value

Figure 2

Figure 3

#### Notes:

- The ambient temperature  $T_{\text{ambient}}$  and the differential between  $T_{\text{ambient}}$  and  $T_{\text{case}}$  mentioned in the above graphs are relevant only as long as both the driver and the light fixture are exposed to the same ambient room temperature. If the LED driver is housed in an enclosure or covered by insulation material, then the ambient room temperature is no longer valid. In this situation, please refer only to the case temperature  $T_{\text{case}}$ .
- It should be noted the graph "Lifetime vs. Ambient Temperature" may have an error induced in the final application if the mounting has restricted convection flow around the case. For applications where this is evident, the actual case temperature measured at the  $T_c$  point in the application should be used for reliability calculations.

### 10 - MECHANICAL DETAILS

- **Packaging Options:** Aluminum case
- **I/O Connections:**
  - **Models with flying leads:** 18 AWG on all leads, 203mm (8 in) long, 105°C rated, stranded, stripped by approximately 9.5 mm, and tinned. All the wires, on both input and output, have a 300 V insulation rating.
  - **Models with "T" suffix:** Terminal Blocks
- **Ingress Protection:** IP20 rated
- **Mounting Instructions:** The VLM60/40 driver case must be secured on a flat surface through the two mounting tabs, shown here below in the case outline drawings. We recommended mounting the VLM60/40 on a baseplate with dimensions of 150 x 60 x 2 mm (5.91 x 2.36 x 0.08 in).

### 11 - OUTLINE DRAWINGS (MODELS WITH FLYING LEADS)

**Dimensions:** L 130 x W 19.85 x H 19.85 mm (L 5.12 x W 0.78 x H 0.78 in)

**Volume:** 51.2 cm<sup>3</sup> (3.12 in<sup>3</sup>)

**Weight:**

All dimensions are in mm
